UASZ AD 2.20 Local Aerodrome Regulations

Aerodrome is available for category C aircraft types YAK-40, AN-24 and AN-26, except for AN-74.

Provision of safety level by mobile fire station, for monitoring the takeoff and landing of aircraft on all sections of the runway, is deployed at the holding point as per airport operation regulations, equipped with optical observation tools and lighting equipment. All airport teams involved in emergency rescue operations are equipped with communication devices through which they receive signals of «Readiness» or «Alert» if necessary.

UASZ AD 2.21 Noise Abatement Procedures

NIL

UASZ AD 2.22 Flight Procedures

1. Flight and ground movement procedures.

Takeoff shall be performed from the starting point of RWY where runway physical characteristics complies required actual aircraft takeoff weight and takeoff conditions.

Aircraft takeoff with tailwind is permitted in case when tailwind speed corresponds to the value: for all aircraft types not greater than value set by Flight Operational manual of each aircraft type, but not greater than 5m/sec; for helicopters - not greater than value set by Flight Operational manual of each aircraft type.

Aircraft ground movement on manoeuvring area shall be carried out by taxiing or towing. Taxiing and towing shall be carried out strictly along TWY centreline and apron guideline.

Hover taxiing of helicopters with skids from stands to takeoff area and back shall be carried out along taxiway markings.

Taxiing shall be carried out after received clearance, taxiing route, stand number and other information for safe taxiing from "Zaisan Tower" ATC. Taxiing speed shall be set by pilot-in-command according to the condition of TWY, presence of obstacles, aircraft weight, wind conditions and visibility.

In all cases taxiing speed should not exceed speed set by Flight Operational manual of this type of aircraft.

"Zaisan" ATC is responsible for taxi route assignment; pilot-in-command is responsible for safety and taxiing rules compliance.

Taxiing out of stands shall be carried out by marshaller's signals, in case of his absence – by pilot-in-command's decision.

Helicopter taxiing shall be carried out with wind limitations, according to Flight Operational manual, at constant visibility of landmarks located in front.

The movement of all types of special vehicles at the airport shall be carried out only at the set marked routes, according to the "Aircraft, special vehicles and mechanical equipment placement and movement chart".

Take-off from the point of crossing TWY1/RWY09 and TWY1/RWY27 is prohibited.

IIFR flights are not carried out beyond the limiting bearing determined by bearings 262° D14 ZSN to BRG 090° D14 ZSN from the NDB ZSN below an altitude of 5000 feet.

2. Low Visibility Procedures.

In low visibility conditions take-off and landing are not performed.

3. VFR procedures within the aerodrome control zone (CTR).

Air traffic service in the control zone (CTR) of the Zaisan aerodrome is carried out by the controller of the «Zaisan -Vyshka» ATC unit. VFR flights in the control zone (CTR) are carried out at absolute altitudes according to the QNH pressure of the aerodrome. Flights altitudes are calculated by the aircraft crew in accordance with the Civil Aviation Flight Rules of the Republic of Kazakhstan. The functions of Air traffic service does not include ground collision avoidance. Aircraft crews are responsible for avoiding artificial obstacles. VFR flights at altitudes below 3000 feet in the control zone are performed at the altitudes indicated in the flight plan or requested by the aircraft crew.

At Zaisan aerodrome holding patterns are established at an absolute altitude to await the VFR approach order for the landing of category «A» aircraft and helicopters. The holding patterns (left/right turns) to be used are determined and reported to the aircraft crew by «Zaisan -Vyshka» ATC unit. Exit to the final leg, crossing the runway course shall be made only with the permission of the «Zaisan -Vyshka» ATC unit.

VFR transit flights through the control zone of Zaisan are carried out along the route via control points and at altitudes agreed with the «Zaisan -Vyshka» ATC unit.

Depending on the air or meteorological situation, the «Zaisan -Vyshka» ATC unit, uses other visual landmarks for arrival, departure, overflight and waiting for aircraft, if necessary.
